Yellow Dream Peony - New For 2024!

Paeonia 'Yellow Dream'

Height: 4 feet

Spread: 4 feet

Spacing: 4 feet

Sunlight:

Hardiness Zone: 2

Description:

This stunning double peony will create a dramatic late spring display in garden and border plantings; the buds open to reveal stunning bright yellow blooms; the fragrant flowers open on stiff stems making them an excellent cut flower

Ornamental Features

Yellow Dream Peony features bold lightly-scented yellow flowers with cherry red centers at the ends of the stems from late spring to early summer. The flowers are excellent for cutting. Its compound leaves remain green in colour throughout the season.

Landscape Attributes

Yellow Dream Peony is an herbaceous perennial with a more or less rounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Yellow Dream Peony is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Yellow Dream Peony will grow to be about 4 feet tall at maturity, with a spread of 4 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
